

POLS W3503: Political Economy of African Development

Columbia University

Fall 2012

Lecture time: Tuesdays and Thursdays, 2:40-3:55pm

Lecture location: 516 Hamilton Hall

Course blog: To be determined

Credits: 3

Who can take the course? The course is designed for undergraduates of all levels. Auditors are welcome with the instructor's permission. For credit, MA students should take my Spring 2013 course, INAF U6164, and PhD students should take my Spring 2013 course, Political Science G8412. Taking the course for credit would not count towards MA or PhD course requirements.

Prerequisites: None, though introductory economics is recommended.

Enrolment limits: The College has capped the course at 40. If the course is oversubscribed, I will try to get an additional TA and bigger room, but otherwise will first give priority to undergraduates by seniority if needed. But stick around as there are usually dropouts after the first week or two and there will likely be space for you.

Instructor: Chris Blattman, Department of Political Science & SIPA, chrisblattman@columbia.edu

Office: IAB 1402c (which they will shortly renumber to 1401a for no apparent reason)

Instructor's web page / blog: <http://www.chrisblattman.com/>

Office Hours: Tuesdays and Fridays 10:00-11:40am, sign-up online at

Course Overview

This course is concerned with a few key questions: Why has Africa remained poor, volatile, and violent? Will Africa see future growth in incomes, stability, and freedom? What role has the West played in past failures, and what role (if any) should it play in the future? The course will cover the history, politics and economics of development in Africa, and dabbles in geography, sociology and anthropology as well. We start in prehistory and work our way up to the present day, with a focus on the 20th and 21st centuries. We interrogate the effects of Western intervention in Africa, from slavery and colonialism to modern-day foreign policy, aid, trade, peacekeeping, and democratization. We cover material ranging from qualitative case studies to formal theories of growth to statistical analyses to post-modern critiques.

No prior exposure to any of these fields is required—the material is designed to be accessible to all, and technical material is presented in a relatively non-technical fashion. So freshmen to seniors are welcome.

Grading

Students will be evaluated on the following basis:

- Lecture attendance (5%)
- Section participation (10%)
- Weekly assignments (40%)
- Final exam (45%)

Lecture attendance

An attendance sheet will be circulated at the beginning of each class by your TA. You are responsible for ensuring you sign your name. Your grade will be proportional to the lectures you attend. You may not sign on another's behalf; violators risk penalties at minimum and potentially failure of the course.

Section participation

The TA will lead sections weekly to discuss the readings, explain any technical material, and discuss the weekly essay/discussion questions with the class. You will be graded on the quality and not the quantity of your contributions. Contributing to the discussion in every section is not required, though contributing regularly is important. You should demonstrate an appreciation of the readings and engagement with the material. Note that more is not always better, and that uncivil or disruptive discussion (as well as overwhelming the class discussion) can be penalized.

Weekly assignments

There are 13 weeks of class this semester.

First week of class: No assignment or section.

Second week of class: There will be a special short assignment required for all students intended to build your familiarity with the economic development theories we will apply throughout the semester.

Third to thirteenth week: The assignment will be a short written essay. I will provide one or two questions that require you to use, analyze, critique, or synthesize the readings and lecture material. In at least 6 of these 11 weeks, you should submit a short essay that discusses and analyzes the material from the week.

These written assignments are designed to give you an incentive to read and think critically about all the readings, and an opportunity to internalize some of the lessons in the readings for core questions in the course. The ability to synthesize and critique large amounts of complex material in one to two pages is one of the most important skills you can learn in college. You will use these skills in your professional life more often than you think: writing policy or business memos, e-mails, letters, and articles.

Guidelines:

- Answer one of the assigned questions using the assigned materials and your own thoughts and opinions. Focus on argument and not excessive summarization of course material.
- You may use additional materials you know or find to help answer the question, but these other works should be properly referenced in the text and in the bibliography.
- Each essay should be less than two pages in length (at least 1.5 inch spaced, 1 inch margins, 12 point font), excluding any reference information on outside materials (if any).
- Email the essay to your TA by [To be determined]. Late assignments are not accepted, since you can submit in future weeks.

- You will be graded on your 7 best submissions, and so you will be able to skip the remainder without penalty. Submitting an essay more than 7 times is to your benefit, but not necessary.
- Essays will be given a letter grade: (A+) inspired, (A/A-) clever and interesting, (B) meets expectations, (C) below expectations, and (D) needs serious improvement. If fewer than 7 comments are submitted, missing comments will receive a zero.
- To receive a strong grade, comments should display knowledge from most of the week's readings. How you organize your essay is up to you, but the best strategy is probably to have three to five clear, persuasive points or ideas, backed up with argument or evidence. Comments should also be written in concise prose—that is, sentences rather than phrases or bullets. You should avoid simply repeating material from the readings, and avoid obvious criticisms if possible.

Final Exam

A final exam will be held on a date to be determined. All required readings and lecture material are testable.

Academic Integrity

Columbia University does not tolerate cheating and/or plagiarism in any form. Those students who violate the code of academic & professional conduct will be subject to disciplinary procedures. College guidelines on academic integrity are here and all students are expected to be familiar with them:

<http://www.college.columbia.edu/academics/integrity>

Since there is a substantial amount of writing in this course, please familiarize yourself with the proper methods of citation and attribution. The College provides some useful resources online:

Readings

Staying Current

Paying attention to African and development news is not required, but it will help you (and might even be interesting). The course blog lists podcasts, blogs, and news sources of interest and value. One idea: sign up for news feeds and relevant blogs in an RSS reader (e.g. Google Reader) and make it your home page.

Required books

The books will also be on 2-hour reserve in the library, so scrambling to get these scarce copies is an option, but I suggest purchasing the four main ones. All are less than \$25, and some are as cheap as \$10 or less. Kindle versions are available in some cases.

Note: Sometimes these books are cheaper (new and used) online than in the bookstore. Double check. I have provided links to Amazon and in some cases Barnes and Noble.

We are going to read most of the following books, which can be bought new and used online easily:

- Todd J. Moss (2011 edition). *African development* (1st or 2nd Ed). London, Lynne Rienner. (also available, maybe faster, on [B&N](#))
- Daron Acemoglu and James Robinson (2012). *Why Nations Fail: The Origins of Power, Prosperity and Poverty*.
- Goran Hyden (2004). *African Politics in Comparative Perspective*. Cambridge, Cambridge University Press. (Note: A Kindle edition is also available)

- Nicolas van de Walle (2001). [*African Economies and the Politics of Permanent Crisis, 1979-1999.*](#) Cambridge, Cambridge University Press.
- Abhijit Banerjee and Esther Duflo (2011). [*Poor Economics.*](#)

Further reading

These books are not required but you may find them interesting background, especially historical background or for alternative perspectives.

This is my list of [Books development researchers and aid workers seldom read but should.](#)

This history of Africa is concise and interesting:

- John Iliffe (2007). [*Africans: The History of a Continent.*](#)

This book is a rather good summary of “alternative” critiques to the mainstream of development theory, including radical, postcolonial, neo-Marxist and feminist approaches. We will read one or two chapters, and several others are in the “recommended” readings for each week. If you are interested in alternative perspectives, this is not a bad book to purchase. But it is not required.

- Uma Kothari and Martin Minogue, eds. (2001). [*Development Theory and Practice: Critical Perspectives.*](#) Palgrave.

The following books are some of the more influential ones in the field of economic development. Since this is a course that emphasizes the political side of development, we discuss economic development a great deal but do not necessarily read these books in full. Reading them will be important to careers in development, so consider reading them in future.

- Esther Duflo and Abhijit Banerjee, “[*Growth Theory Through the Lens of Development Economics*](#)”
- William Easterly (2001). [*The Elusive Quest for Economic Growth: Economists' Adventures and Misadventures in the Tropics.*](#)
- William Easterly (2006). [*The White Man's Burden: Why the West's Efforts to Aid the Rest Have Done So Much Ill, and So Little Good.*](#)
- Paul Collier (2007). [*The Bottom Billion.*](#)
- Jeffrey Sachs (2006). [*The End of Poverty: Economic Possibilities for Our Time.*](#)
- David Landes (1999). [*The Wealth and Poverty of Nations: Why Some Are So Rich and Some So Poor.*](#)
- Dambisa Moyo (2009). [*Dead Aid.*](#)

Weekly readings

“Required” readings are, well, required—you’ll need to show that you’ve read and understand them in your short essays and critical book reviews.

“Recommended” readings are optional. I will sometimes highlight their findings in lecture, and these lecture discussions (and not the full articles) are testable on the final exam. Reading the recommended articles will undoubtedly give you a better understanding of some of these lecture topics, however, and are also potential sources of material for your short essays. So please do not ignore them entirely.

“Further reading” is a list of books and articles that you should consider in future if the week’s subject interests you. They are not required at all for the course and are not remotely testable.

Week 1: Introduction

Required readings
